

Terms and Conditions

Placing an order

Please describe what items you require via email. Please provide your mailing address. Be aware as most parts are made on demand and waiting time will occur.

When an order is placed and deposit paid (If required) gets you in line. We do not bump people that have placed orders and paid deposits before you. First come first served policy applies.

Payment

Stocks require a 50% deposit as they are made on demand. Cancelling your order will forfeit your deposit.

Any exchange rates, electronic payment fees, wire transfers, bank fees associated with purchases are the responsibility of the purchaser. All prices on the price list excludes these fees and shipping.

Final payment is due no later than 30 days from work completion. Service charge of 2% per month after will be applied to final bill.

Shipping

Shipping fees are calculated at time of shipment. A shipping quote is a quote as rates can and do change before goods are ready for shipment.

International orders. Any broker fees, importing fees or importing taxes are the responsibility of the purchaser. We will not reduce prices on customs forms for international shipments. Ensure your country allows these parts to be imported. That is your responsibility.

All shipments are shipped tracked and require a signature. Insurance is highly recommended and we will provide shipping costs showing with and without insurance.

Parts will be either bubble wrapped or foam wrap with additional paper packing to reduce movement.

Duplication

We use original stocks that are over 100 years old. They may have imperfections such as flat spots from the factory. We will try to feather these out the best we can, however they may still be present. Cutter marks are rare but do happen. Depending on the depth of the cutter mark and location, they maybe present. Sanding them out may drastically alter the stock profile.

We cannot guarantee colour or wood figure of the wood before hand. The duplication process will show that and once oiled. Minimum of four coats of linseed oil will be applied before shipping. Knots in non critical areas maybe present on rare occasions. That does not exclude the rifle from function and not considered a defect.

Oil tube hole in the butt is not drilled out. To help reduce people from passing the rifle as all original, we do not drill them out.

Time for duplication varies on orders and availability of wood. Generally no more than 3 months from time of order to shipping. If longer we will communicate that to you.

We use our barrelled actions, bayonet bands, mid bands, butt plate with screws for fitting. We try to make the drop in as easy as possible for you. Mid bands and butt plates from your original rifle maybe bent and not fit properly. You may have to alter them to fit the stock.

Bedding compound maybe necessary on certain areas. This is due to cutter grabbing at the wrong time and place. The stocks are long and like to flex. We try not to use it if we can.

On rare occasions a stock may twist/warp. All stocks are straight when it leaves, however due to different climates that may occur during transportation and or the location you reside in may cause this to happen. We cannot be held responsible for this. We can offer suggestions on fixing this if it does occur.

Other Parts

Bayonet bands will not have the stacking swivel attached. We cannot produce a good replication of them.

As some parts are 3d metal printed they may have very fine lines that cannot be removed 100%. We will try our best to remove these lines. They may also not be exactly like the originals.

Some screws are produced on a manual lathe while others are ready made screws that have been altered.

Butt Stamps

We use reproduction butt stamps. They are not exactly the same as the originals. We can also offer year and serial number marks to the stock at no additional charge. Please provide that information at time of stock order.

Assembly

Assembly requires tools. Use proper screw drivers and place a thick towel or some other material to help protect the wood when using the screw driver. Bayonet bands and mid bands may require tapping in place. Use a wood block as a buffer or plastic mallet. Stock cracks from loose receiver screws during firing are not our responsibility.

As stated previously all stocks will be fitted with our hardware prior to leaving. We will take pictures of it stocked up and provide them via email once they are completed.

Agreement

By agreeing to these terms and conditions we can do business. During email correspondence we will ask you if you agree to them. A copy of that email will be saved for future reference if required.

Ross Parts Price List Effective 1 Jan 2020

BAYONET BANDS	
MKIII Band Includes cross screw	\$150
